

# Atomsk Cheat Sheet

For Atomsk version beta-0.11.2 - <https://atomsk.univ-lille.fr/>

## Syntax

Convert a file into another file or format:  
`atomsk <input> [<options>] <output>`

Use a mode:  
`atomsk --mode <parameters>`

## Basic examples

Convert a file:  
`atomsk initial.xsf final.cfg`

Convert a file to several formats:  
`atomsk initial.xsf cfg vesta lammps`

Duplicate a system:  
`atomsk input.cfg -duplicate 3 3 4 final.cfg`

Create a unit cell of fcc aluminium:  
`atomsk --create fcc 4.02 Al Al.cfg`

Display help:  
`atomsk --help`

## File for option -properties

`auxiliary <property>`  
`charge`  
`displacement [function]`  
`elastic [Voigt]`  
`orientation`  
`type`  
`velocities`  
`supercell`

## File for mode --polycrystal

`box <Hxyz  
random <N>  
lattice <sc|bcc|fcc|diamond|hcp>  
node <x> <y> <z> <α> <β> <γ>`

## Options

Add new atom(s):  
`-add-atom <species> at <x> <y> <z>`  
`-add-atom <species> relative <index> <x> <y> <z>`  
`-add-atom <species> near <index>`  
`-add-atom <species> random <N>`

Add shells:  
`-add-shells <species|all>`

Align first box vector along X:  
`-alignx`

Re-associate shells with their matching core:  
`-bind-shells`

Modify cell vectors:  
`-cell <add|rm|set> <d>`  
`<H1|H2|H3|x|y|z|xy|xz|yx|yz|zx|zy|xyz>`

Place atom of given index, or system's center of mass, at center of the box:  
`-center <index|com>`

Insert a crack:  
`-crack <I|II|III> <stress|strain> <Ks12`

Cut the system above or below the given plane:  
`-cut <above|below> <d> <normal>`

Deform the system:  
`-deform <direction> <ε> <ν>`

Insert a dislocation:  
`-dislocation <p12  
-dislocation <p12  
<edge|edge_add|edge_rm> <ξ> <n> <b> <ν>  
-dislocation <p121  
<b23  
-dislocation loop <x> <y> <z> <n> <radius>  
<bxyz`

## Options (continued)

Apply a random perturbation:  
`-disturb <dmax  
-disturb <dxyz`

Duplicate the system:  
`-duplicate <Nxyz`

Fix the coordinates of some atoms:  
`-fix <axis>`  
`-fix <axis> <above|below> <d> <normal>`

Convert atom positions into reduced coordinates:  
`-fractional`

Apply a mirror transformation:  
`-mirror <d> <normal>`

Apply options from a file:  
`-options <file>`

Change the crystal orientation:  
`-orient <hkl>x <hkl>y <hkl>z <hkl'>x <hkl'>y <hkl'>z`

Find a suitable equivalent orthogonal cell:  
`-orthogonal-cell`

Read properties from a file (see Files):  
`-properties <file>`

Auto-detect box dimensions:  
`-rebox`

Reduce cell size, preserving periodicity:  
`-reduce-cell [<x|y|z>]`

Remove atoms from the system:  
`-remove-atom <index>`  
`-remove-atom <species>`  
`-remove-atom select`

Remove atoms that are too close to another one:  
`-remove-doubles <distance>`

## Options (continued)

Remove one or all per-atom property:

-remove-property <property|all>

Remove shells for one or all atom species:

-remove-shells <species|all>

Roll the system around an axis:

-roll <direction> < $\theta$ > <axis>

Rotate the system around an axis:

-rotate [com] <axis> < $\theta$ >

Round-off atom coordinates or a property to the given accuracy:

-round-off <property> <accuracy>

Select atoms according to given criteria:

-select all

-select invert

-select <species>

-select <index>

-select <i<sub>1</sub>>,<i<sub>2</sub>>,<i<sub>3</sub>>:<i<sub>4</sub>>,...

-select list <file>

-select random <N> <species>

-select <above|below> <d> <dir>

-select <in|out> cell

-select <in|out> box <x> <y> <z> <x'> <y'> <z'>

-select <in|out> sphere <x> <y> <z> <R>

-select <in|out> cylinder <axis> <x<sub>1</sub>> <x<sub>2</sub>> <R>

-select <in|out> cone <axis> <x> <y> <z> < $\alpha$ >

-select <in|out> torus <axis> <x> <y> <z>

<R> <r>

-select prop <property> <value1[:value2]>

-select <NNN> <species> neighbors <index>

-select grid <file>

-select stl [center] <file>

-select [add|rm|intersect|xor] <any of the above>

Separate atoms that are too close to one another:

-separate <distance> <shift>

## Options (continued)

Apply simple shear strain:

-shear <n> <A> <s>

Shift atoms:

-shift < $\tau_x$ > < $\tau_y$ > < $\tau_z$ >

-shift <above|below> <d> <normal> < $\tau_x$ > < $\tau_y$ > < $\tau_z$ >

Sort or pack atoms:

-sort <property> <up|down|pack>

Apply transformations of the given space group:

-spacegroup <group>

Apply stress or read stress tensor from a file:

-stress <xx|yy|zz|xy|xz|yz|p> < $\sigma$ >

-stress <file>

Substitute atoms:

-substitute <sp1> <sp2>

Swap two atoms or atom species, or Cartesian directions:

-swap <id1> <id2>

-swap <sp1> <sp2>

-swap <x|y|z> <x|y|z>

Apply torsion to the system:

-torsion <axis> < $\theta$ >

Change the unit of the given property:

-unit <property> <factor>

-unit <unit1> <unit2>

Change the box so that it appears less skewed:

-uns skew

Generate random atom velocities:

-velocity <T>

Wrap atoms into the box:

-wrap

## Modes

Average several systems:

atomsk --average <listfile> <outputfile> [<formats>] [options]

Create an atomic system from scratch:

atomsk --create <lattice> <a<sub>0</sub>> [<c<sub>0</sub>>] <sp1> [<sp2> <sp3>...] [orient (hkl)<sub>x</sub> (hkl)<sub>y</sub> (hkl)<sub>z</sub>] [options] <outputfile> [<formats>]  
atomsk --create nanotube <a<sub>0</sub>> <m> <n> <sp1> [<sp2>] [options] <outputfile> [<formats>]

Read two files and write them in ddplot format:

atomsk --ddplot <file1> <file2> [<outputfile>] [options]

Read several files, write all systems into one:

atomsk --gather <listfile> <outputfile> [<formats>] [options]

Convert a list of files:

atomsk --list <listfile> [<formats>] [options]

Generate N systems by interpolation between two files:

atomsk --interpolate <file1> <file2> <N> [<outputfile>] [formats] [options]

Merge or stack N systems:

atomsk --merge [x|y|z] <N> <file1>...<fileN> <outputfile> [<formats>] [options]

Construct a polycrystal using Voronoï tessellation:

atomsk --polycrystal <seed> <param\_file> <outputfile> [<formats>] [options]

Read a file containing several systems and write each of them in a separate file:

atomsk --unfold <file> [<prefix>] [<formats>] [options]

Unwrap atom coordinates:

atomsk --unwrap <reference> <configuration> [<outputfile>] [<formats>] [options]
